Client Confidential

Role

Integrated Alliance to Provide Engineering, Procurement, Construction, Maintenance, Asset Productivity and Technology Support to INVISTA

Highlights

INVISTA originated as a wholly owned subsidiary of the DuPont Company and produces many well known chemicals, fibers and polymer base products. A few of the products include Lycra®, Cordura®, Stainmaster® and Supplex®.

Overview

Palmetto Management & Engineering (PME), a Global Performance subsidiary company, was formed to support a unique relationship with INVISTA Engineering creating an "Integrated Team" to provide a full range of engineering department support services. These services include capital planning, project identification, siting, front-end development, technology stewardship, engineering design, global procurement, construction management, power and energy management, maintenance excellence and technical support.

The "Integrated Team" has been formed through a unique contractual relationship that allows PME and INVISTA to eliminate many of the non-productive costs associated with the traditional owner/contractor relationship. This savings is passed on to INVISTA to provide them a significant competitive advantage.

PME has its home office in Wilmington, Delaware, but also has employees located at numerous sites throughout the United States and Asia.

INVISTA's primary manufacturing locations include North and South America, China, Southeast Asia and Western Europe.
